Social Network

18-Point Configuration

#	Subject Module	Type	Points
1	Frontend and backend frameworks	Major	2
2	Real-time features	Major	2
3	User interaction	Major	2
4	Standard user management	Major	2
5	Organization system	Major	2
6	Advanced permissions	Major	2
7	ORM	Minor	1
8	Notification system	Minor	1
9	Advanced search	Minor	1
10	File upload and management	Minor	1
11	Custom design system	Minor	1
12	OAuth 2.0 authentication	Minor	1
	Major subtotal	**6 modules**	**12**
	Minor subtotal	**6 modules**	**6**
	Total	**12 modules**	**18**

Scoring Boundaries

- User Interaction and Standard User Management are separate listed modules with overlapping requirements. Demonstrate the full requirements of each.
- Blog, Events, and Marketplace are product features, not additional scoring modules in this configuration.
- Basic resource ownership, such as editing your own post, does not by itself satisfy Advanced Permissions.
- Community membership and community roles support Organization System. Platform-wide user CRUD and role management support Advanced Permissions.
- Advanced Chat, custom modules, AI features, and game modules are not included in the 18-point total.

Features

Page	Features to build
Register / Login	Email and password registration, login, logout, and one OAuth provider
Home Feed	Text and photo posts; comments; likes; chronological feed
Profile	Avatar, biography, published content, friends, and online status
Friends	Send, accept, reject, and remove friend connections
Messages	Persistent one-to-one chat with real-time delivery
Communities	Create communities, join them, manage members, and publish community posts
Blog	Write, save drafts, publish, edit, and delete articles
Events	Create events, register, cancel registration, and receive event updates
Marketplace	Publish items, browse listings, contact sellers, and mark items as sold
Notifications	Persistent notifications, unread count, mark as read, and links to relevant content
Search	Search users and published content, with filters, sorting, and pagination
Administration	Manage users and roles; moderate content
Settings / Legal	Edit account information; access Privacy Policy and Terms of Service

End-to-End Demonstration

1. Alice registers, completes her profile, and uploads an avatar.
2. Bob signs in through the external provider and accepts Alice's friend request.
3. Alice publishes a photo post; Bob comments; Alice receives a notification.
4. Alice and Bob exchange private messages and verify history after reconnecting.
5. Alice creates a community and adds Bob as a member.
6. Alice publishes a blog and creates a community event; Bob registers.
7. Alice changes the event time; Bob receives a persistent notification.
8. Bob publishes a marketplace listing; Alice finds it using filters, sorting, and pagination and contacts him through chat.
9. An administrator changes a user's role; a moderator demonstrates permitted content actions.
10. Demonstrate image/PDF upload, progress, previews, access control, and deletion.

Six-Week Delivery Plan

The project lasts six weeks, with a **3 + 3 delivery structure**:

- **Weeks 1–3:** A, B, and C develop the working social core and prepare extension contracts.
- **Weeks 4–6:** all five members develop, integrate, test, and prepare the release. D and E start in Week 4, not Week 3.
- No development, or preparatory work is assumed from D or E before Week 4.
- Backend language remains open between Go and Python. A/B/C must settle the framework, ORM, and shared conventions in Week 1 before substantial implementation begins.

1. Roles

Member	Delivery Role	Organisational Role	Availability	Main Accountability
A	Product, frontend, and content core	Product Owner + Developer	Weeks 1–6	Product scope, shared UI, design system, profiles, Feed, Blog, and frontend integration.
B	Backend, identity, and data core	Technical Lead + Developer	Weeks 1–6	Backend architecture, authentication, ORM/migrations, file service, platform permissions, OAuth, and deployment.
C	Social and real-time core	PM / Scrum Master + Developer	Weeks 1–6	Friends, private chat, presence, persistent notifications, connection recovery, and delivery coordination.
D	Communities and event integration	Developer	Weeks 4–6	Full-stack community lifecycle and membership; complete community integration and acceptance of the prebuilt event foundation.
E	Marketplace and discovery	Developer	Weeks 4–6	Full-stack marketplace, advanced search, filters, sorting, pagination, and seller-contact integration.

2. Milestones

Phase 1 — Weeks 1–3: Three-Person Core Development

Goal: a usable social application, shared extension services, and a handover that lets D/E deliver without rebuilding foundations.

Week	A — Product / Frontend / Content	B — Backend / Data / Identity	C — Social / Re
1: Foundation	Finalise scope/navigation; application shell; initial components; registration/login/profile forms; content API draft.	Select stack with team; containers/HTTPS/database; ORM and migration pattern; secure registration/login/logout; user identity and authorization conventions.	Friendship/conve models; social Al event contracts; request endpoint authenticated WebSocket proo concept.
2: Social workflow	Profile and image-upload UI; post CRUD; Feed; comments/likes using the agreed backend pattern.	Profile/media endpoints; access checks; image/PDF storage; platform role model and user-management API foundation.	Friends UI; persi private chat and initial presence; notification stora and live delivery.
3: Stable core and handover	Complete design-system inventory and file controls; Blog draft/publish workflow; basic Event form/detail screens; extension navigation.	Complete file validation/preview/access/deletion; OAuth first integration; Event CRUD/RSVP/capacity foundation; extension schema and permission review.	Reconnection/pr improvements; read/unread flow documented noti API; domain eve hooks and social regression check

Phase 2 — Weeks 4–6: Five-Person Delivery

Goal: complete Communities, Events, Marketplace, Search, and all remaining module requirements, then release a tested application.

Week	A	B	C	D
4: Parallel feature delivery	Finish Blog; administration screens; assist Event UI; component reviews.	Complete OAuth and platform user/role management; support D onboarding; review migrations.	Harden chat/presence; support notification integrations; complete social query adapters.	On CR per cor
5: Integration and feature completion	Integrate Blog/Event/listing cards in Feed; responsive fixes; legal pages; owner-provided content search queries.	Validate Event concurrency and cross-module permissions; finalize domain queries and migrations; deployment rehearsal.	Audit notification action coverage; offline/reconnect/multi-tab checks; integrate remaining triggers with owners.	Co cor int cap att pro qu
6: Stabilization and evaluation	Cross-feature UI regression; acceptance checklist; README product/feature sections; demo coordination.	Fresh-install/migration/deployment checks; security/authorization fixes; schema and technical documentation.	Multi-user/realtime regression; notification fixes; coordinate blocker triage and demo rehearsal.	Co per reg mo do
